

🔥 If I were preparing in your situation

I'd make a Namaste JavaScript-style Python revision path like this:

PART 1 — Python Core

1. Python Execution Model
2. Variables & Objects
3. Data Types
4. Mutable vs Immutable
5. == vs is
6. Numbers
7. Strings
8. Lists
9. Tuples
10. Sets
11. Dictionaries
12. Slicing
13. Operators

PART 2 — Control Flow

1. if / elif / else
2. for loops
3. while loops
4. break / continue / pass
5. range()
6. enumerate()
7. zip()
8. match / case
- 9.

PART 3 — Functions

1. Functions
2. Parameters vs Arguments
3. *args
4. **kwargs
5. Default Arguments
6. Keyword Arguments
7. Scope
8. LEGB
9. Global / Nonlocal
10. Lambda
11. First-Class Functions
12. Higher-Order Functions

PART 4 — Python Deep Concepts

This is where the Namaste JavaScript feeling really starts:

1. Iterable
2. Iterator
3. Generator
4. yield
5. Generator Expression
6. Decorators
7. Closures
8. Context Managers
9. with statement
10. **enter**
11. **exit**
12. Comprehensions
13. Shallow Copy
14. Deep Copy

PART 5 — OOP

1. Class & Object
2. **init**
3. self
4. Instance Variables
5. Class Variables
6. Instance Methods
7. @classmethod
8. @staticmethod
9. @property
10. Inheritance
11. Method Overriding
12. Multiple Inheritance
13. MRO
14. super()
15. Abstract Classes
16. Protocols
17. Magic / Dunder Methods

PART 6 — Python Internals

This is very important for senior interviews:

1. Python Memory Management
2. Reference Counting
3. Garbage Collection
4. GIL
5. Stack vs Heap
6. Object Interning
7. Python Bytecode
8. CPython

9. `name == "main"`

PART 7 — Async Python

Especially important because you're working with FastAPI:

1. Synchronous vs Asynchronous
2. Blocking vs Non-blocking
3. Coroutine
4. `async`
5. `await`
6. `asyncio`
7. Event Loop
8. Task
9. Future
10. `gather()`
11. `create_task()`
12. Async Context Manager
13. Async Generator
14. Async Iterator

PART 8 — Backend Python

Then move into the stuff directly relevant to your work:

1. Virtual Environment
2. `pip`
3. `requirements.txt`
4. `pyproject.toml`
5. Type Hints
6. Pydantic
7. FastAPI
8. Dependency Injection
9. Middleware
10. Background Tasks
11. SQLAlchemy
12. Async SQLAlchemy
13. `pytest`
14. Logging
15. Configuration / `.env`
